

Streaker Boats Launches SCB Hulls 100% Timber Free

When fibreglass became the material of choice in the 1960's boats were built with a timber floor and transom. Some boat builders haven't changed their construction technique and many boats are still built this way, but not at Streaker Boats.

Every Streaker model now coming off the production line is a full, 100% composite build... which means no timber and no rot.

Branded as Streaker Composite

Built (SCB) the new technology is leading the way in the Australian boat building industry. Timber has gone forever in Streaker boats and is replaced with the latest technology, all composite materials construction method.

Fibreglass and composite materials provide a superior blend of strength with low weight. The mirror finish, low maintenance attributes of these materials ensure not only an attractive, easy to care for Streaker boat, but one which holds its value for decades.

Every Streaker model is now constructed utilising an advanced all-composite construction method.

The composite build process focusses upon all key areas of the hull, the transom, the sub floor system and all upholstery backings. All Streaker models now have a full composite, rot free transom. This is manufactured by laying up panels to create a thick sheet of composite material.

In the sub floor, a cross girder and bulkhead construction system is utilised with foam flotation material also included. The sub floor foam adds strength and safety, while also delivering a quieter ride. Every Streaker Boat is delivered with an ABP (Australian Builders Plate) compliance plate and all hulls are manufactured to comply with the Australian Standard AS1799.

“The advent of new materials and our relentless drive to continually develop the Streaker product has brought the Streaker Composite Boat feature to the market,” said Peter Benston, Dealer Manager of Streaker Boats Australia.

“Our objective was to eliminate all timber from our Streaker SCB hulls so as to produce a more durable product for our customers. We have achieved this without compromising strength and without adding to the manufacturing cost. It’s a win all round.”

“Boating families can now compare a Streaker SCB hull with other brands and be confident that a Streaker hull will outlast any boats which use timber in the manufacturing process.”

Streaker is a great boat which has become even more durable with greater peace of mind.

The new, all-composite construction technique is now the standard construction specification for all Streaker 2016 built models.

Streaker Boats Australia is long established Australian boat manufacturing business, based in Queensland. Established in 1973, Streaker Boats is a quality fibreglass boat manufacturer. The product range includes stylish bow riders, offshore fishing models and open runabouts. Streaker Boats are distributed exclusively through a network of Authorised Dealers throughout Australia.
